### Advantages

- ✓ Up to 85% reduction of the overall volume of the scrap.
- ✓ Increase of the economic value of the scrap.
- ✓ Reduction of time in managing the scrap.
- ✓ Recovery of cutting oils and coolants from the scrap.
- ✓ Reduction of the environmental impact.
- ✓ Increase of the cleanliness of the workshop.

### Sludgecompact

#### **Briquetting machine for the compaction of grinding sludge**

EVTM-45-L briquetting press is a machine designed for the compaction and enhancement of scrap which requires a high efficiency liquid extraction process. It is particularly suited for the compaction of grinding sludge.

EVTM-45-L is provided with a suction device which allows to recover the oil ejected during compaction phase, obtaining the lowest possible percentage of residual oil in the final briquette. The compacted material ceases to be considered as special waste and becomes raw material for smelting furnaces.

### Supercompact

#### **Briquetting press suited to be placed directly under the chip conveyor**

EVTM-55-L is a compact briquetting machine which encloses all components into a single chassis. It is specially designed to be placed nearby the tool machine, and positioned under the chip conveyor belt.

EVTM-55-L is provided with devices which allow it to operate in fully automatic mode. Moreover, the wheels and the handle, that make it unique, allow easy movements inside the workshop according to the production needs.

### Smartcompact

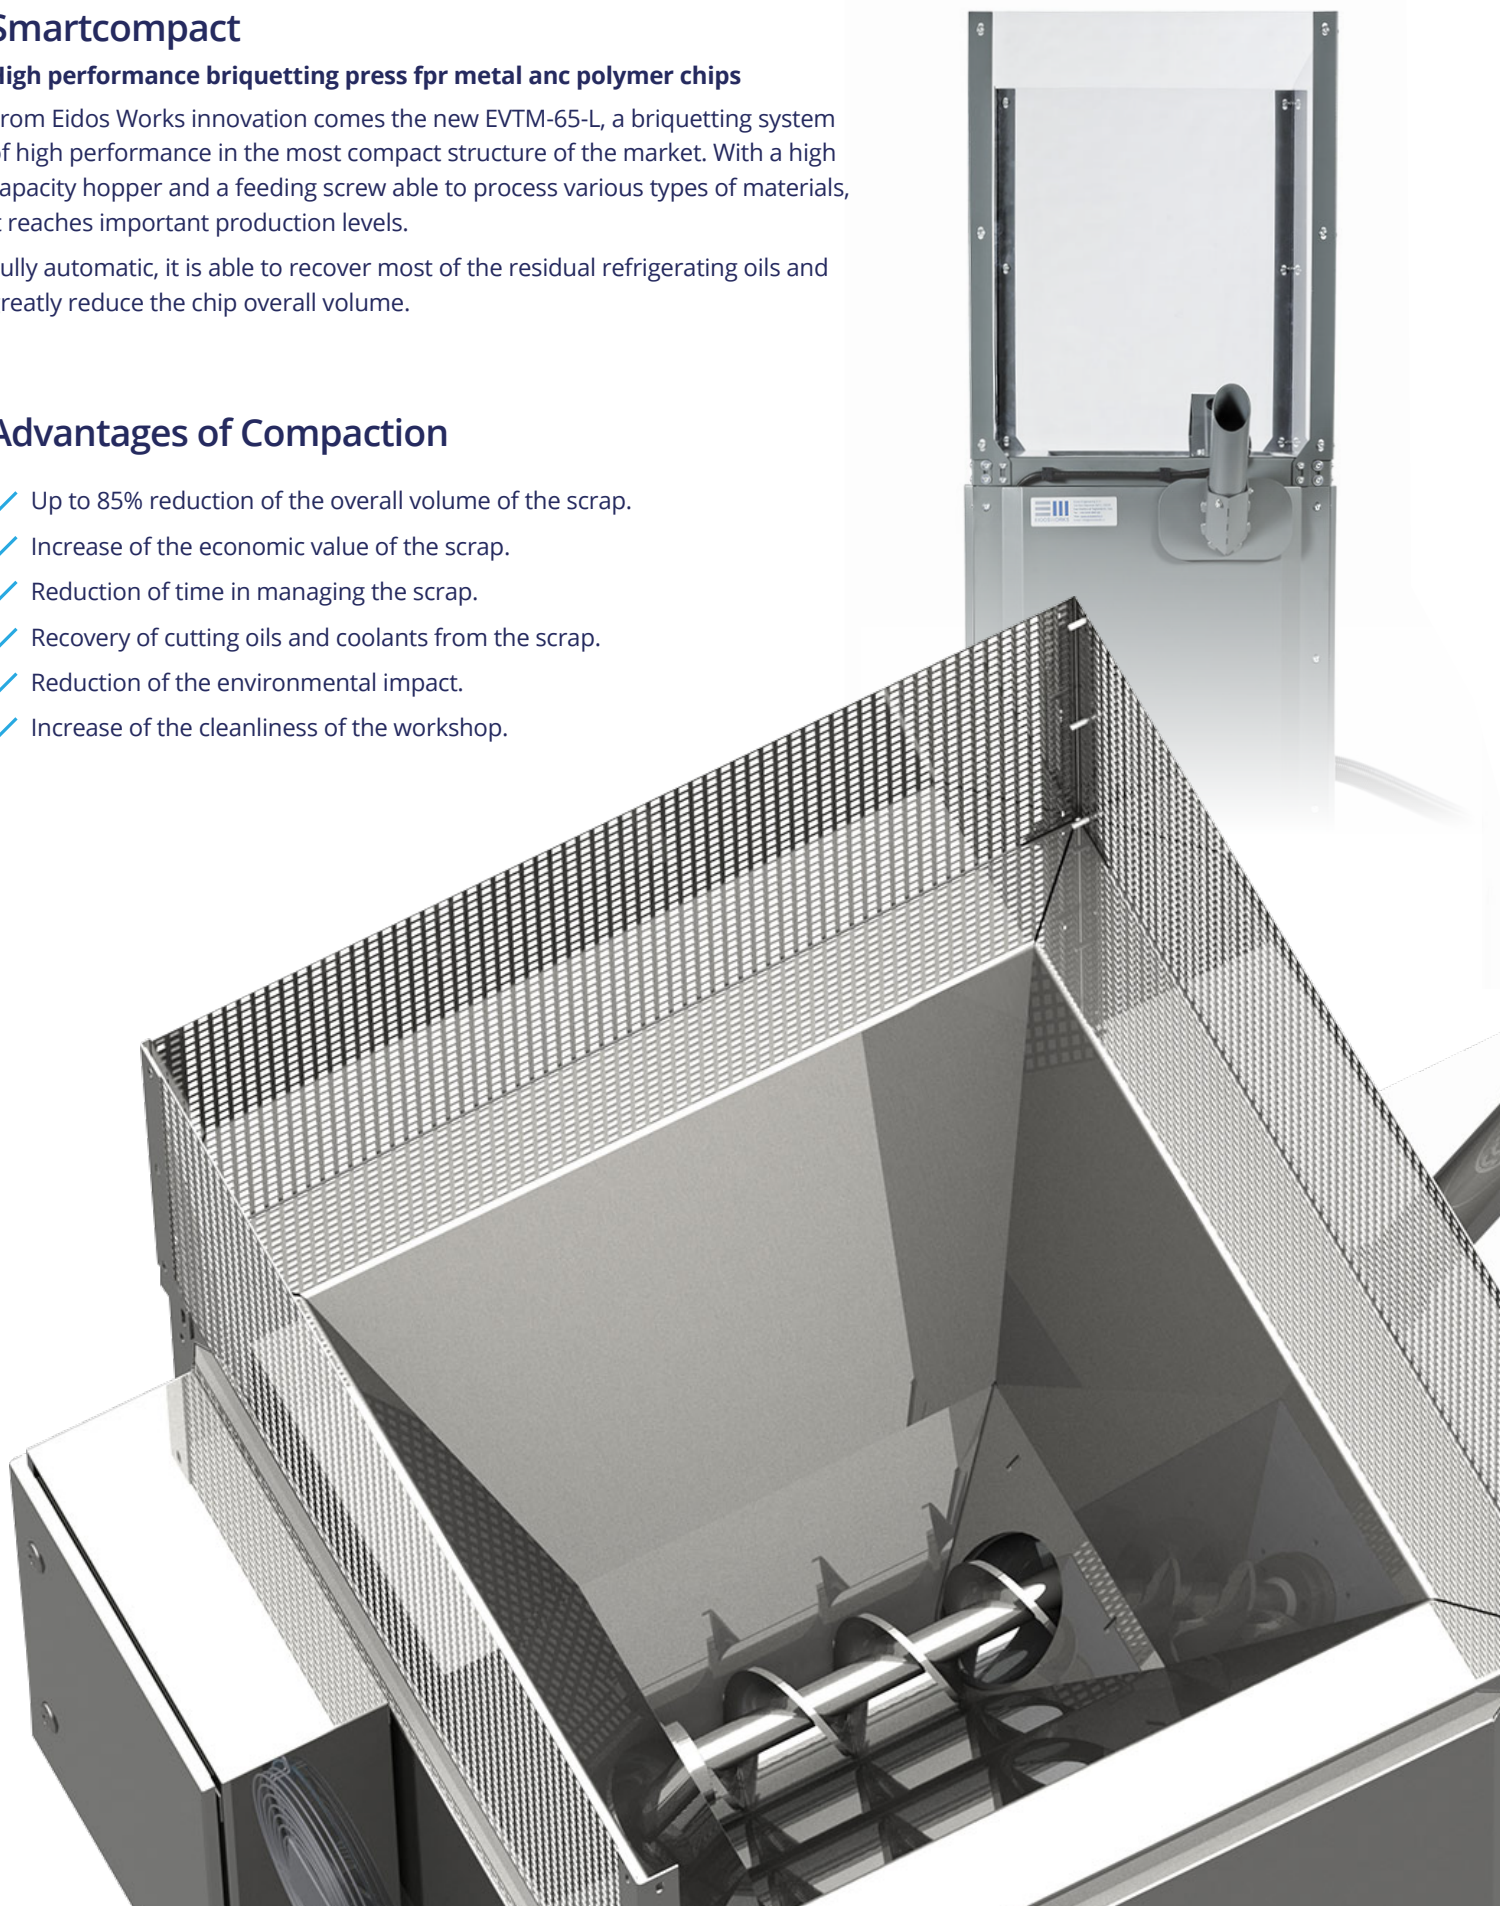

#### High performance briquetting press fpr metal anc polymer chips

From Eidos Works innovation comes the new EVTM-65-L, a briquetting system of high performance in the most compact structure of the market. With a high capacity hopper and a feeding screw able to process various types of materials, it reaches important production levels.

Fully automatic, it is able to recover most of the residual refrigerating oils and greatly reduce the chip overall volume.

### Advantages of Compaction

- ✓ Up to 85% reduction of the overall volume of the scrap.
- ✓ Increase of the economic value of the scrap.
- ✓ Reduction of time in managing the scrap.
- ✓ Recovery of cutting oils and coolants from the scrap.
- ✓ Reduction of the environmental impact.
- ✓ Increase of the cleanliness of the workshop.
